Strong

Coastal Home Management 30A · August 2026

The site is graded strong for traditional Google ranking. 3 issues were surfaced across 11 categories. Work the Master Action List in P-rank order — every action there names the exact URLs to fix.

FOUNDATION HEALTH	SCORE	STATUS
Crawl & Index Can Google fetch, render, and index every page?	100	Strong
Indexability	100	Strong
Sitemap & robots	100	Strong
Page quality Once indexed, does each page rank for what it should?	92	Strong
Structured data (SEO)	58	Needs work
Title tags	100	Strong
Meta descriptions	100	Strong

Page experience Mobile-first, accessible, fast, well-linked.	72	Needs work
Internal linking	0	At risk
Mobile-friendly	100	Strong
Image alt text	100	Strong
Page speed	100	Strong

02 • Master Action List

Every recommendation, ranked. Sort by P-rank (already applied) — P0 first. **Where you'll make these edits:** Titles, meta descriptions and head tags are edited in your CMS's per-page SEO fields (or the page templates on a custom stack); sitewide tags belong in the shared <head> template.

#	P	ACTION	OWNER	SCOPE	ETA
LNK-01	P1	Pages with very few internal links Add 3-5 internal links per page from the body copy to related pages on your site. Internal linking distributes PageRank and tells Google which pages matter. WHERE: / (1 internal links)	Dev	Site-wide	1-2 days
SCH-01	P1	BreadcrumbList schema missing on content pages Enable breadcrumb schema (Yoast/Rank Math do this automatically once breadcrumbs are turned on; on a custom stack, emit `BreadcrumbList` JSON-LD in <head>). Breadcrumbs are a documented Google rich result. WHERE: / (no BreadcrumbList)	Dev	Per-page	1-3 hrs
SCH-02	P2	Article / BlogPosting schema missing on content pages Add Article (or BlogPosting / NewsArticle) JSON-LD to every content page. This is what unlocks the Article rich result and the Top Stories carousel.	Dev	Per-page	1-3 hrs

03 · Quick Wins (2 weeks)

Items that can be shipped in ≤3 hours of effort, packed into a two-week sprint.

1. **SCH-01 · BreadcrumbList schema missing on content pages** — 1–3 hrs

Enable breadcrumb schema (Yoast/Rank Math do this automatically once breadcrumbs are turned on; on a custom stack, emit `BreadcrumbList` JSON-LD in <head>). Breadcrumbs are a documented Google rich result.

WHERE: / (no BreadcrumbList)

2. **SCH-02 · Article / BlogPosting schema missing on content pages** — 1–3 hrs

Add Article (or BlogPosting / NewsArticle) JSON-LD to every content page. This is what unlocks the Article rich result and the Top Stories carousel.

04 • Page-by-Page Audit

Per-URL metrics. 1 of 1 audited pages shown. Cells flagged when outside the display band (title 30–70, meta 70–170 chars).

URL	TITLE	META	H1	ALT%	LINKS	KB
/		54	132	1	100%	164

05 · Schema Library (SEO-flavored)

Paste-ready JSON-LD scaffolds tuned to Google's rich-result library. Different priorities from AI Access — Breadcrumb + Article + Product lead here.

BC-01 · BreadcrumbList (every content page)

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "BreadcrumbList",
  "itemListElement": [
    {
      "@type": "ListItem",
      "position": 1,
      "name": "Home",
      "item": "https://ryderschilling.com"
    },
    {
      "@type": "ListItem",
      "position": 2,
      "name": "<!-- category -->",
      "item": "https://ryderschilling.com/<!-- category-slug -->"
    },
    {
      "@type": "ListItem",
      "position": 3,
      "name": "<!-- this page -->",
      "item": "https://ryderschilling.com/<!-- category-slug/page-slug -->"
    }
  ]
}
</script>
```

Most overlooked SEO win — unlocks the breadcrumb path display in the SERP. Yoast/Rank Math emit this automatically once breadcrumbs are on.

ART-01 • Article schema (every blog / content post)

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Article",
  "headline": "<!-- article H1 -->",
  "description": "<!-- 1-2 sentence summary -->",
  "image": "https://ryderschilling.com/<!-- hero-image.jpg -->",
  "author": {
    "@type": "Person",
    "name": "<!-- author name -->"
  },
  "publisher": {
    "@type": "Organization",
    "name": "Coastal Home Management 30A",
    "logo": {
      "@type": "ImageObject",
      "url": "https://ryderschilling.com/logo.png"
    }
  },
  "datePublished": "<!-- YYYY-MM-DD -->",
  "dateModified": "<!-- YYYY-MM-DD -->",
  "mainEntityOfPage": "https://ryderschilling.com/<!-- post-slug -->"
}
</script>
```

Unlocks the Article rich result and the Top Stories carousel. BlogPosting is acceptable; NewsArticle for time-sensitive coverage.

PROD-01 • Product schema (every product page)

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Product",
  "name": "<!-- product name -->",
  "description": "<!-- product description -->",
  "image": "https://ryderschilling.com/<!-- product-image.jpg -->",
  "sku": "<!-- product SKU -->",
  "brand": {
    "@type": "Brand",
    "name": "Coastal Home Management 30A"
  },
  "offers": {
    "@type": "Offer",
    "priceCurrency": "USD",
    "price": "<!-- 0.00 -->",
    "availability": "https://schema.org/InStock",
    "url": "https://ryderschilling.com/<!-- product-slug -->"
  }
}
</script>
```

Unlocks price / availability / star-rating rich results. Use Service schema instead on service pages.

LOC-01 · LocalBusiness (Contact page) — local SEO

```

<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "LocalBusiness",
  "name": "Coastal Home Management 30A",
  "url": "https://ryderschilling.com",
  "telephone": "<!-- E.164 phone -->",
  "address": {
    "@type": "PostalAddress",
    "streetAddress": "<!--street-->",
    "addressLocality": "<!--city-->",
    "addressRegion": "<!--state-->",
    "postalCode": "<!--zip-->",
    "addressCountry": "<!--ISO-->"
  },
  "openingHoursSpecification": [
    {
      "@type": "OpeningHoursSpecification",
      "dayOfWeek": [
        "Monday",
        "Tuesday",
        "Wednesday",
        "Thursday",
        "Friday"
      ],
      "opens": "09:00",
      "closes": "17:00"
    }
  ],
  "priceRange": "$$"
}
</script>

```

Required to compete in the Google Local 3-pack. Lat/long optional but accelerates GBP parity.

ORG-01 · Organization (every page, site-wide <head>)

```

<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "name": "Coastal Home Management 30A",
  "url": "https://ryderschilling.com",
  "logo": "https://ryderschilling.com/logo.png",
  "description": "<!-- 1-2 sentence factual description -->",
  "sameAs": [
    "<!-- https://www.linkedin.com/company/your-handle -->"
  ]
}
</script>

```

Foundational identity. AI Access also depends on this — one Organization block satisfies both reports.

06 • Title & Meta Optimization

Pages where the title or meta description falls outside the display band (title 30–70, meta 70–170 chars) — broken in the SERP today.

No broken titles or meta descriptions on the audited pages — nothing missing, truncated, or too short for Google to display. Verify uniqueness across the full site separately.

Sweet-spot opportunities

Not broken, but off the 50–60-char title / 140–160-char meta sweet spot — each one is SERP real estate a rewrite reclaims. Shortest titles first.

URL	CURRENT TITLE	OPPORTUNITY
/	Web Designer & Developer, Ryder Schilling RYDER® (54)	meta 132 chars — room for a benefit clause

How these pages render in Google today

Pixel-honest mockups of the blue-link result, truncated exactly where Google truncates. An ellipsis (...) means searchers never see the rest — that's the sentence to tighten first. First pages of the audit shown.

ryderschilling.com

[Web Designer & Developer, Ryder Schilling | RYDER®](#)
Ryder Schilling. Websites, done properly: custom sites and AI systems for local businesses that want to look incredible and perform.

07 • Heading Hierarchy

Pages with H1 problems (none or multiple) or no H2 subheadings. Each page should have exactly one H1 and use H2s to break up long content.

No heading-structure issues on the audited pages.

08 • Sitemap & robots.txt

The two files Google looks for first when crawling a new site. Both must be live, both must point at each other.

09 • Validation Checklist

A one-line verification step per action. Tick each as you confirm the fix landed.

#	ID	TEST	HOW TO VERIFY	STATUS
1	LNK-01	Pages with very few internal links	Re-audit; affected pages should now report ≥3 internal links each.	☐ Pending
2	SCH-01	BreadcrumbList schema missing on content pages	Validate at search.google.com/test/rich-results — the recommended schema should now register.	☐ Pending
3	SCH-02	Article / BlogPosting schema missing on content pages	Validate at search.google.com/test/rich-results — the recommended schema should now register.	☐ Pending

10 • Glossary

Plain-English definitions of the SEO terms used in this report.

Canonical tag

A <link rel="canonical"> tag telling Google which URL is the authoritative version of a page. Prevents duplicate-content dilution.

Core Web Vitals (LCP / INP / CLS)

Google's three measured page-experience metrics: Largest Contentful Paint (how fast the main content shows, good $\leq$ 2.5s), Interaction to Next Paint (how fast the page responds to input, good $\leq$ 200ms), and Cumulative Layout Shift (how much the layout jumps while loading, good $\leq$ 0.1).

Crawl budget

The number of pages a search engine will crawl per visit. Bloated sites with many junk URLs exhaust the budget before reaching the important pages.

H1

The single primary heading of a page. Google uses it as one of the strongest in-page relevance signals.

hreflang

A tag declaring the language + region of a page. Required for multi-locale sites to avoid cannibalization.

Indexability

Whether a page is eligible to appear in search results at all (Googlebot allowed, not noindex'd, served over HTTPS, has a canonical).

Meta description

The summary Google may show beneath the page title in the SERP. 140–160 chars is the sweet spot.

Mobile-first indexing

Since 2019 Google ranks the mobile rendering of a page, not the desktop one. A missing viewport meta = ranked as a non-responsive site.

P-rank (P0/P1/P2)

Priority assigned to each action. P0 = ship in 14 days. P1 = ship in 30 days. P2 = ship in 60–90 days.

Rich result

An enhanced search result with imagery, ratings, prices, FAQ accordions, etc. Unlocked by adding the matching schema (Product, Article, FAQPage, etc.).

Sitemap.xml

An XML file listing every URL on the site Google should crawl. Belongs at the site root and should be referenced from robots.txt.

Title tag

The clickable headline in the SERP and the first thing in the browser tab. 50–60 chars before Google truncates it.
